For More Details

Mercedes Benz Sprinter - 2002

Fault: Vehicle will not start.

Symptom of Fault: "ERR" is being displayed in the dash

Cause of Fault: The starter circuit in the main ECU or the security circuit could be faulty.

Remedy of Fault: You will need to locate the 40 AMP starter relay which is located behind the black side panel of the drivers seat, remove the relay and bridge the large female terminals of the relay socket. By bridging this out the engine will either run or not. If the engine does not start it is common that there is a fault in the security circuit, sometimes the transponder chip can become dislodged from the key.

Caution; When jump starting vehicle with infrared keys.

Fault: Vehicle won't start.

Cause of Fault: The electronic infrared key can be damaged when left in the ignition whilst the vehicle is jump started or the battery has been replaced.

Note: The infrared key does not have to be in the ON position for damage to occur.

Remedy of Fault: Always remove the infrared key from the ignition when jump starting or replacing the battery, if damage has occurred to the key, use the spare key to start the vehicle. You may need to reprogram the keys with a scan tool.

KIA Rio - 2000

Fault: Engine starts but will only keep running by operator repeatedly pumping the accelerator pedal.

Cause of Fault: Faulty MAP sensor.

Remedy of Fault: Look at this as being a faulty MAP sensor, which may need to be replaced.

KIA Sportage - 2001

Fault: Vehicle will not start.

Symptom of Fault: No instrument lights are illuminating in the dash, the engine cranks, all fuses have power.

Cause of Fault: There is a 15 AMP fuse located at the drivers side kick panel, the fuse is the third from the bottom in the fuse box. The female connection of this 15 AMP fuse is not making contact.

Remedy of Fault: Take out the fuse box and refit the terminal connector for that 15 AMP fuse.
